 Dharmapuri, Tamilnadu

 github.com/SharanAkash

Objective

Results-driven Software Test Engineer with 3+ years of experience in test automation, microservices testing, and environment automation. Specialized in building scalable test frameworks using Selenium, Playwright, and BDD Cucumber for B2B/B2C e-commerce platforms. Proven expertise in reducing testing time by 85–92% through intelligent automation and leveraging AI-powered development tools (Claude Code, Cursor AI) to accelerate project delivery by 40–50%. Seeking to contribute technical excellence and innovative testing strategies to drive quality assurance in a dynamic, growth-oriented organization.

Professional Experience

Software Test Engineer, Swiggy07/2025 – Present

Software Test Engineer, Lynk (acquired by Scootsy, part of Swiggy)08/2023 – 06/2025

Education

B.E - Computer Science, Mahendra Engineering College

2017 – 2021 | Namakkal

Technical Skills

Programming Language Core Java, SQL	Frameworks BDD Cucumber, TestNG, POM, J-Unit, Data Driven	Build Tool Maven
Version Control Tool GIT	Bug Tracking Tool JIRA	Automation Tool Selenium WebDriver, Playwright
CI/CD Jenkins	API Testing Postman and Rest Assured	AI-Powered Development Claude Code, Cursor AI - Proficient in leveraging AI agents to accelerate development workflows, automate repetitive tasks, and reduce project completion time by 40–50%

Core Competencies

- Having 3 years of IT Software experience in Functional Testing, UI Automation testing, API Testing, and Microservices Testing for B2B/B2C e-commerce platforms
- Strong expertise in Test Environment Automation including automated provisioning, configuration, and deployment of microservices
- Designed and implemented test environment automation platform reducing setup time by 70% (4 hours to 30 minutes)

- Developed 200+ automated test cases using Selenium WebDriver, Playwright, and BDD Cucumber achieving 85–92% reduction in testing time
- Experience in designing and implementing test automation frameworks using Core Java with Selenium WebDriver, POM Design Pattern, Data Driven and BDD Cucumber Framework
- Proficient in creating JSON-based environment templates for service configurations, dependencies, and deployment specifications
- Hands-on experience with microservices architecture components including Kong, Kafka, Consul, MySQL, Redis, Elasticsearch
- Strong expertise in B2B and B2C e-commerce platform testing including order management, checkout, inventory, and payment processing
- Hands on experience in XPATH, CSS selectors, and element locator strategies
- Experience in web application and mobile application automation testing (Android/iOS) with Page Object Model using Maven
- Proficient in API testing using Postman and Rest Assured for microservices integration testing
- Strong knowledge in TestNG Framework for test execution and reporting
- Experience in CI/CD integration with Jenkins for continuous testing and automated deployments
- Experience in working with GIT version control and branching strategies
- Proficient in SQL and JDBC for database testing and validation
- Experience in Functional, Smoke, Regression, Re-Testing across multiple environments (Dev, Staging, UAT, Production)
- Experience in cross-browser testing ensuring platform compatibility across different browsers
- Expertise in preparation of Test scenarios, Test cases, Test data collection, and Test documentation
- Participated in all the agile ceremonies including sprint planning, daily scrum, retrospectives, and sprint delivery reporting
- Strong collaboration skills working with cross-functional teams including testers, developers, DevOps, and product teams
- Experience in defect lifecycle management and tracking issues through JIRA
- Experience in conducting application training sessions and mentoring team members on automation frameworks
- Proficient in AI-powered development tools (Claude Code, Cursor AI) enabling 40–50% faster project completion and improved code quality through intelligent automation
- Proven track record of reducing testing time by 85–92% through test automation initiatives

Projects

Test Environment Automation Platform, Swiggy | July 2025 – Present 07/2025 – Present

Description: Comprehensive test environment automation platform designed specifically for Swiggy's microservices architecture. The platform enables automated provisioning, configuration, and management of test environments for various Swiggy services including Assure (B2B wholesale platform). It facilitates seamless environment setup, service deployment, and automated testing workflows, reducing manual effort and improving testing efficiency across multiple microservices. Roles & Responsibilities:

- Developed and maintained automated test environment provisioning scripts for Swiggy microservices
- Created JSON-based environment templates defining service configurations, dependencies, and deployment specifications
- Automated environment setup and teardown processes reducing environment creation time by 70% (from 4 hours to 30 minutes)
- Integrated test automation framework with CI/CD pipeline using Jenkins for continuous testing
- Implemented automated health checks and validation for deployed microservices ensuring service reliability
- Configured and managed service dependencies including Kong (API Gateway), Kafka (Message Broker), Consul (Service Discovery), MySQL, Redis, and Elasticsearch
- Created comprehensive test scenarios and test data for environment validation
- Collaborated with development teams to ensure proper service integration and deployment
- Maintained environment configuration documentation and templates for team reference
- Performed regression testing on environment automation workflows to ensure stability

- Leveraged Claude Code to accelerate script development and reduce implementation time by 45%

Swiggy Assure - B2B Wholesale Platform Testing, Swiggy | July 2025 – Present 07/2025 – Present

Description: Swiggy Assure is a B2B wholesale platform designed specifically for the HoReCa (Hotels, Restaurants, and Cafés) industry. It is a centralized one-stop-shop that allows commercial kitchens, caterers, and cloud kitchens to source high-quality wholesale raw materials with next-day delivery. The platform offers a comprehensive catalog including Fresh Produce, Dairy & Bakery, Staples & Groceries, Beverages & Packaged Goods, Frozen & Meat, and Packaging & Disposables. Roles & Responsibilities:

- Led end-to-end testing of post-order flows including order processing, fulfillment, and delivery tracking
- Automated test cases for checkout service, discovery service, and post-order consumer services using Selenium WebDriver and BDD Cucumber framework
- Performed comprehensive API testing using Postman and Rest Assured for microservices integration
- Created and executed test scenarios for B2B order management, inventory synchronization, and payment processing
- Implemented data-driven testing framework for bulk order validation and pricing verification
- Conducted functional, smoke, and regression testing for multiple microservices (assure-post-order, assure-checkout-service, assure-discovery-service, assure-credit)
- Validated item catalog management, offer management, and bulk upload functionality
- Performed mobile application testing for Assure Android builds (UAT and Production releases)
- Collaborated with product and development teams to ensure quality delivery of B2B features
- Managed defect lifecycle and tracked issues through JIRA with detailed reproduction steps
- Participated in agile ceremonies including sprint planning, daily standups, and retrospectives
- Provided regular testing status reports and quality metrics to stakeholders

B2C Grocery Platform Automation

08/2023 – 06/2025

Lynk (Scootsy, part of Swiggy) | August 2023 – June 2025

Description: lynk-neutrino is a comprehensive test automation framework developed for Lynk's B2C grocery delivery platform. Lynk provides a wide range of products including Fresh Produce (locally sourced vegetables and fruits), Dairy & Bakery, Staples & Groceries (rice, atta, pulses, sugar, cooking oils), Beverages & Packaged Goods, Frozen & Meat, and Packaging & Disposables. The platform serves individual customers with quick delivery of daily essentials and grocery items. Roles & Responsibilities:

- Developed 200+ automated test cases using Selenium WebDriver and BDD Cucumber framework
- Implemented Page Object Model (POM) design pattern for maintainable test automation
- Created comprehensive test scenarios for customer order flows, catalog browsing, cart management, and checkout processes
- Automated regression test suite achieving 85% automation coverage for critical user journeys
- Performed API testing for backend services using Rest Assured and Postman
- Conducted functional testing for product listing, search functionality, pricing, and promotional offers
- Executed smoke testing for staging environment releases (lynk-mandi-staging-smoke)
- Implemented data-driven testing framework for handling multiple test data sets
- Created reusable test components and step definitions for efficient test development
- Integrated test automation with Jenkins CI/CD pipeline for continuous testing
- Conducted mobile application testing for Android and iOS platforms
- Performed cross-browser testing to ensure platform compatibility
- Collaborated with development team to identify and report defects through JIRA
- Participated in sprint planning, daily standups, and retrospectives
- Maintained test documentation including test plans, test cases, and automation reports
- Trained new team members on automation framework and testing processes
- Achieved 92% reduction in regression testing time through automation
- Utilized Cursor AI to accelerate test script development and debugging processes

Personal Projects

Restaurant Onboarding Automation, Tech Stack: Java, Python, Node.js, MCP Server, Jira Integration

Description: Comprehensive automation framework for Swiggy's restaurant onboarding process with multi-language implementation. Key Features:

- Developed end-to-end automation for restaurant onboarding flow including authentication, signup, and management
- Implemented three different approaches: Python script for quick execution, Java application for enterprise integration, and MCP Server for AI agent integration
- Built MCP Server with Node.js enabling AI assistants (Claude, Gemini) to control automation via natural language
- Integrated with Jira for automatic bug creation on automation failures and task management
- Utilized Claude Code to accelerate development and streamline implementation across multiple languages

Hunter-Service, Tech Stack: Java, Spring Boot, REST APIs

Description: Backend service implementation for automated testing and service management with comprehensive API endpoints. Key Features:

- Developed RESTful API services using Java and Spring Boot for test automation workflows
- Implemented service management capabilities for automated test execution and monitoring
- Created modular architecture supporting multiple testing scenarios and configurations
- Integrated with test automation frameworks for seamless test execution
- Utilized Claude Code for rapid development and code optimization

Key Achievements

- Successfully automated 200+ test cases across Lynk and Swiggy projects, reducing manual testing effort by 85%
- Designed and implemented environment automation platform (sit-assure) reducing environment setup time from 4 hours to 30 minutes (70% improvement)
- Achieved 92% automation coverage for critical B2C and B2B user journeys
- Integrated test automation with CI/CD pipeline enabling continuous testing and faster releases
- Led post-order flow testing for Swiggy Assure B2B platform ensuring quality delivery
- Collaborated across multiple teams (development, product, DevOps) for successful project delivery
- Leveraged AI-powered development tools (Claude Code, Cursor AI) to accelerate project completion by 40–50%
- Built multi-language automation framework (Python, Java, Node.js) with MCP server integration for AI agent compatibility
- Mentored team members on test automation best practices and framework implementation
- Reduced regression testing cycles from 8 hours to less than 1 hour through intelligent automation
